

Preview of the 2014 AMOS PROJECTS

5 ECTS / 10 ECTS Projekt / Praktikum
Coming to you Sommer Semester 2014!

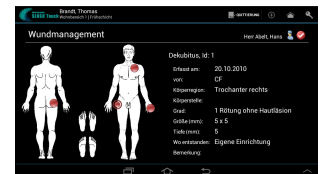

Learn **Agile Methods (Scrum) and Open Source**
while working with our industry partners on these projects:

SAP AG: A **race course designer** for SAP's Sailing Analytics web service. The race course designer is to be developed on an Android tablet; it visualizes the course, allows for start, intermediate and end way points, and adds more functionality.

Develop Group GmbH: A **cross-platform mobile app** for hospitals. Using a cross-platform development toolkit, the app is to run on multiple target platforms and to provide hospital wound management functionality.

SOLYP GmbH: A tablet-based **management dashboard** application; the dashboard is to provide strategic key business figures about productivity, intellectual property, and business processes at a company; usability is important.

DATEV eG: A **web service for routing and map coloring using OpenStreetMap**; the web service is to determine the best connection between two points, display it on a map, color neighboring areas properly, and provide additional information.

The AMOS Projects are a 5 (Lecture + Exercises) or 10 ECTS Projekt / Praktikum, available to all degree programs! You'll learn professional team-based software development, in particular Scrum, while working with an industry partner to have as realistic as possible a project experience.
